# Mining Ultra-Large-Scale Software Repositories and StackOverflow to study *sun.misc.Unsafe* API usage patterns in Java applications

Luis Mastrangelo\*, Matthias Hauswirth\* and Nate Nystrom\*
\*Faculty of Informatics, University of Lugano

Abstract—

We analyse source code repositories to answer the following question: How and how much the Unsafe API is used in Java projects?

Our aim is to devise if the Unsafe API is used extensively so it is worth to create a new language to improve programmer productivity.

### I. INTRODUCTION

*sun.misc.Unsafe* is an undocumented <sup>1</sup> class provided by Oracle. It allows the developer to access low-level programming features. It is the equivalent to unsafe <sup>2</sup> in C#.

There is a trend in the late years to use *sun.misc.Unsafe*. The main reason to use *sun.misc.Unsafe* is *performance*. Because *sun.misc.Unsafe* provides methods to allow the programmer to access otherwise impossible low-level details. For instance, *sun.misc.Unsafe* contains methods to do CAS operations, the base ground to develop lock-free data structures.

Our research goal is to find Similar [1]

It is possible to group methods in *sun.misc.Unsafe* by functionality. Table I shows all methods (without overloads) grouped by functionality.

Trend using unsafe methods. But what for? Certainly you can do everithing without Unsafe API, so why using it?

Stackoverflow mining.

Measure error with boa.

Bugreport stackoverflow posts.

Overall, the main contributions of this paper are two-fold:

- We present a detailed study of how the Java sun.misc.Unsafe API is used and
- We constrast this information on why this API is used based on responses from Stackoverflow.

The rest of this paper is organized as follows: Section II presents related work. Section III explains the methodology and technologies used to get our results. Section IV shows the results we obtained and Section V concludes.

### II. RELATED WORK

rel work

GHTorrent [2] provide GitHub quering but for metadata, not source code mining, true?

Group	Methods						
Array	arrayBaseOffset arrayIndexScale

FUNCTIONAL GROUPS OF sun.misc.Unsafe

### III. METHODOLOGY

methodology

We searched for Boa [3]

discouraged.

The complete API documentation and more extensive examples are available online <sup>4</sup>.

Our Boa script starts

### A. Reflection

What happens with other uses such as reflection? It is not detected but it uses Unsafe. There should be a way to measure this kind of use.

Look for problematic uses of the API, and some use patterns.

## IV. RESULTS

The Figure 1 shows the pie.

The figure 3 shows how many times a method is called. Grouped by functional group.

The most called is objectFieldOffset. Because the result is then used by many other calls to Unsafe.

# V. CONCLUSIONS

Although the current use of *sun.misc.Unsafe* seems low in SourceForge, it is important to notice the snapshot is from September 2013. It would be interesting to apply the same analysis but to the current GitHub source code database. Unfortunately at the moment we could not find any full dataset

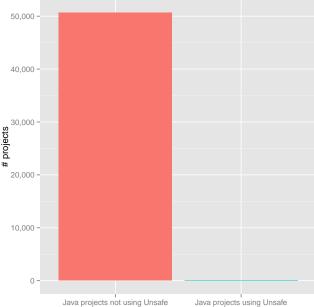

Fig. 2. Project using unsafe

from GuitHub.

We strongly believe that this study will help us to develop our language.
